

ABSTRACT OF THE DISCLOSURE

The present invention relates to a card-type terminal such as a PC card with a memory card such as a USIM card. It allows a memory card to be secured easily on a tray and
5 inserted easily into a card-type terminal. A card-type terminal includes a tray slidable in and out freely with a memory card mounted, and a guide which helps the tray slide in and houses the inserted tray; in which the memory card is placed on the tray, which is slid into the guide, thereby
10 installing the memory card in the card-type terminal. The tray has a holder which secures, to the tray, the forward-end center section of the memory card mounted along the insertion direction of the tray and an elastic restraining piece which secures, to the tray, the backward-end center section of the
15 memory card mounted along the insertion direction of the tray.
